How Two Point Perspective Works...

Now we'll create a simple street scene. We'll start by drawing our first basic form. We'll first establish the horizon line, place two vanishing points apart from one another, and draw the corner in between.

From each end of the corner, we'll draw two lines on each side back to each of the vanishing points

From each end of the corner, we'll draw two lines on each side back to each of the vanishing points

With two vertical lines, we'll establish the back end of our first form. Remember, these lines should be perfectly vertical and parallel to the corner
